Argon Beam Coagulator

Case-by-Case
MOBILE SERVICE

The Argon Beam Coagulator (ABC) allows physicians to achieve non-contact hemostasis with minimal thermal injury of adjacent or underlying tissue.

The ABC is highly effective on high impedance tissues and eliminates muscle chattering. It causes minimal smoke plume or odor and does not ignite fatty tissue.

Benefits of the ABC include superior coagulation, reduced OR time, a reduction in blood loss, minimal tissue damage and enhanced healing of the treatment site.
